

TRITON T-10

KEY INFORMATION & SPECIFICATIONS

Top Features

- Tour-proven by the likes of Coldplay, others
- 10W of balanced, direct-diode RGB power
- Full RGB 1,000+ colors to match and blend perfectly with traditional moving head fixtures
- X-Laser's Mercury control firmware integrated for direct lighting console control using common protocols such as sACN, RDM, Art-Net, etc.
- Instant "gobo"/digital pattern changes and rapid 30K scanners for smooth pattern motion
- 0.1° to 45° zoom range
- Active diagnostic readouts via LCD panel

The X-Laser Triton T-10 brings big power and proven IP65 reliability to any professional production or touring rig. Designed to dazzle, this fixture boasts 10 watts of well-balanced, full-RGB color to help fill the air with punchy, laser-sharp beams. And with its proven reliability on the recent Coldplay world tour, the Triton T-10 has a reputation amongst both designers and stagehands for being a laser that gets it done without worry night after night.

The Triton T-10 features full RGB direct-injection laser diode modules, tuned for ideal balance to color mix on par with—or better than—today's top-brand "traditional" fixtures. Creating looks with rich berry, vivid orange or intense lime colors is no problem for Triton. Designers also benefit from the creative power and flexibility of X-Laser's **Mercury Laser Control System**, which enables programming directly from the lighting console using the same show file and common signal protocols such as DMX, sACN, Art-Net as well as RDM configuration capability. For even more creative flexibility, the Triton T-10 can be specified for audience scanning and offers the option of legacy laser control firmware integrated, too.

The Triton T-10 empowers designers to give their shows laser-specific creative advantages such as an impressive zoom range of 0.1° to 45° plus instantaneous zoom and digital "gobo" changes, making it an awesomely punchy complementary effect fixture for all sorts of venues and genres. And because the show must go on, the Triton T-10's easy-to-understand live diagnostic LCD readout and field-serviceable alignment save techs valuable time should the need to troubleshoot on the road ever arise.

This laser ships individually in a standard plastic Pelican-style road case and up to 3 units will easily fit inside a standard-size wheeled touring cart.

Satisfy stagehands, delight designers and amaze audiences with the Triton T-10 from X-Laser.
